

Lab 16: Dashboard Interface to Heat

Objective 1.

Scope **lisa/crm-dev**.

Download **instance-example.hot** from Lecture Resources. Review the Template.

Launch the Stack with **instance-example.hot**:

- Stack Name: **testing**
- Rollback on failure: True
- Flavor: **m1.tiny**
- Image: **devOS-3.5**
- Keypair Name: **scrm-keypair1**
- Network Name: **dev-www-net**

After the Stack is created:

- Consult Stack Topology
 - Check the Overview, login to the Console using Output section
 - Check the List of Stack Events
-

Objective 2.

Scope **lisa/crm-dev**.

Update the testing Stack, using the same Template file and all parameters with same values, set Network Name to **dev-db-net**.

Objective 3.

Scope **lisa/crm-dev**.

Create a New Stack using Direct Input as Template Source.

In Template Data type in a Heat Orchestration Template to create a single Instance:

- Name: **my_server**
- Type: **OS::Nova::Server**
- Flavor: **m1.tiny**
- Image: **cirros**
- Keypair: **scrm-keypair1**
- Network: **dev-www-net**

Launch the stack.
