

Lab 17: Heat on Command Line

Objective 1.

Scope **amy/sales-crm**.

Review **instance-example.hot** in **labs** subdirectory of **coa** user home directory.

Launch the Stack with **instance-example.hot**:

- Stack Name: **test-stack**
- Rollback on failure: True
- **flavor=m1.tiny**
- **image=system-3.5**
- **key_name=amy-kp2**
- **net_name=crm-db-net**
- **vol_size=1**

After the Stack is created:

- Display details of the Stack
 - List Resources of the Stack
 - List Events of the Stack.
-

Objective 2.

Scope **amy/sales-crm**.

Update the Stack **test-stack** with the same Template and parameters, change Network Name to **crm-www-net**.

Login to **my_instance** with Console and fix the configuration of Instance networking.

Objective 3.

Scope **amy/sales-crm**.

Using the editor of choice, **Create the Template** with:

- Resource of Type **OS::Cinder::Volume** with **size1**

Launch the Stack with the Template.
